

# 'A Day in DALES...' –suggested time windows for data collection on the day

## Notes:

1. You can interview patients admitted for Majors the day before e.g. CABG
2. The primary Patient Survey takes priority first thing on Day of Surgery
3. Follow-Up requires notes only, not the patient; you may wish to prioritise the primary Patient and Anaesthetist Surveys
4. Using paper anaesthetist surveys (with upload after) can make it easier to capture data; surveying anaesthetists in the afternoon should help reduce any potential bias
5. If running DALES on sequential days you can once again interview patients admitted for Majors the day before
